

TeamQuest OSAM for Clear Path OS 2200 Systems

Monitor and Manage Your
System Resources

TeamQuest OSAM (OSAM) is an online activity monitor software package for ClearPath and 2200 systems. OSAM allows all departments in an organization to monitor and manage their particular system resources. People with different responsibilities communicate about performance issues more effectively.

TeamQuest OSAM can help you:

- Scan exception reports to show peak volume periods, system resources, and overall system performance
- Receive early warning of problems
- Resolve issues before they become critical
- Respond quickly and accurately to phone calls from users about system performance
- Make recommendations on factual analysis rather than supposition

In-Depth Analysis

- Analyze UDS applications, MCB and step control applications, and TIP usage
- Analyze data from SIP, M\$CON\$, system KONS, UDS control, step control, MCB and system log file

Problem Alerting

- Define your own thresholds
- Resolve problems before they become critical with early warning
- Specify actions to be taken when thresholds are met or exceeded

Reporting Capabilities

- View textual reports of monitored information
- Generate customized reports from performance databases

Performance Database

- Provide logging, database maintenance, batch execution, replay and report capabilities with the OSAM performance database
- Store monitored information in the OSAM performance database

Data Collection

- Collect Software Instrumentation Package (SIP) data
- Collect file track usage by run
- Assemble Overall Transaction Processing (TIP) environment and individual transactions
- Group Message Control Bank (MCB) and COMPOOL environments
- Group batch and demand runs and programs
- Assemble step control queue trees
- Gather Overall Universal Data System (UDS) environments and UDS threads
- Gather Communications Management Systems (CMS) performance statistics
- Collect mass storage utilization for the fixed pool and by device
